**Bakersfield, CA– February 10, 2023** – DC Energy, a Bakersfield, California, sustainable energy and operations consulting firm serving food processing and heavy industrial clients in California’s Central Valley and beyond, will be at the 2023 Food Processing Expo in Sacramento, February 14-15, 2023. The company will be hosting booth 722, where they invite attendees to stop by and get information about how DC Energy can help businesses navigate the upcoming FPIP solicitation, which closes on March 8, 2023, as well as find out about how they can help companies meet internally and externally mandated sustainable supply chain objectives.

DC Energy professional engineers are CARB accredited, CEM, CMVP, PMVA and IREE certified and have helped some of the most recognized brands in the Central Valley save more than 40 million MTCO<sub>2e</sub> in annual greenhouse gas emissions and 2.8 million therms of annual natural gas, while securing \$25 million in utility rebates, incentives, grants, and financing, with more than \$17 million of those funds coming from FPIP grants.

DC Energy are experts at identifying FPIP-qualifying energy efficiency projects. They apply years of experience in energy and sustainability management to develop the projects, write competitive grant applications, perform the required measurement and verification (M&V), and take care of all ancillary grant management tasks.

To help businesses better understand DC Energy’s services and value as a sustainable energy management partner, the company recently launched a new website: [www.dcenergyservices.com](http://www.dcenergyservices.com), where individuals can find information on the many ways DC Energy assists food processing and heavy industrial facilities in meeting their sustainability objectives. The website features news and events, as

well as team bios featuring the expertise and qualifications of DC Energy's two lead engineers/co-founders, Jack DiGiacomo and Thomas Cochran, and the newest team member, project manager Victoria Quinn.
